DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-4 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 and 4 of U.S. Patent No. 6,719,674. Although the conflicting claims are not identical, they are not patentably distinct from each other because with respect to claims 1 and 3, the method steps define the method of providing the invention of claim 1 of the '674 patent. Specifically, claim 1 of the '674 patent teaches a handle (lifting member) weight holders, weights sized and configured to be supported by the weight holders and having upwardly open and upwardly closed portions that define respective selector paths, and a weight selector having weight engaging members (weight supports) that engage respective selector paths. With respect to claims 2 and 4, '674 teaches a device including a lifting member, a weight holder, and a weight selector having weight engaging members that can engage respective weights that can be placed in the weight holder, wherein the

selector and thus the weight engaging members may be move laterally (in a direction parallel to an interface defined by adjacent weights) to lock a first one of the weights, and moving the selector laterally again (and therefore the weight engaging members) to lock a second one of the weights.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
